(57) Abstract:

PROBLEM TO BE SOLVED: To simplify setting operation to recognize contents of business and to accelerate confirmation of the business.

SOLUTION: When a timer 15 is set so that an alarm output means outputs an alarm tone at a date and time designated by a key entry section 14, a CPU 13 allows an LCD 11 to display a plurality of illustrations different by each business which is stored in advance in an illustration memory 17 as a selection instruction to the user. When an arbitrary illustration is selected and designated, the CPU 13 stores this designated illustration to a presentation memory 18 in cross reference with a designated date and time. When the designated date and time arrives, the CPU 13 reads the designated illustration, corresponding to the date and time from the presentation memory 18, and allows the LCD 11 to display the designated illustration.
